Features:

1. Children's metal detectors for the development of exciting interests and hobbies.
2. Applications: Science Education, Parents - Children's Activities, Simple Metal Detection.
3. High sensitivity and easy operation, can be used to find lost or lost gold coins, gold coins, jewelry and other metal objects. In addition, you may find many caps, metal tabs and foil packaging.
4. Children's ideal gift, children's toy treasure hunter. Lightweight, ergonomically designed for ease of operation and comfort. Enjoy yourself!
5. Features: LCD display. Light weight and easy to operate. Sensitivity adjustment.

Description：

Portable child smart metal detector.

This metal detector can be used as a probe for beginners to detect coins, jewelry and other metallic substances. You can use it to detect substances such as caps. This detector is very sensitive.

This digital programming circuit enhances the interest of children and students in detecting nature. There are many substances in nature that contain metallic properties and exist in various forms. Through the exploration of children and students, the children can subconsciously understand the magic and mystery of nature through their own practice. Learn from play and increase your hobbies and interests in things.

Applications: Science education, parent-child activities, simple detection, etc.

Product specifications：

Color: as shown
Packing size: 45*18*7.5cm
Product weight: 0.6kg
Package weight: 0.7kg
Voltage: 9V (6F22)
Battery: 1*9V battery (battery not included)
Working frequency: 55.3KHz
Working current: static: 20mA
Maximum: 70mA
Working voltage: 7-9V
Sensitivity: 10mm can measure one dollar coin
Indication mode: sound mode
LCD liquid crystal mode
Telescopic rod length: 6.1 inches
8 probe disk diameter: 6.77 inches

Products included:

1* metal detector
1* instruction manual
