

## Roof-Mounted Lighting Equipment SITE SCAN The Economical Version

The Site scan 1.2m series is most simple version by fixing the rotating platform directly to the mast, with only the up-down function of from 0 degree to 90 degree to realize the completing searching position and lighting function, fairly suitable for installation on the roof of small and medium size vehicles like Cars, Pickuptrucks to deal with the small size accident scene and emergency lighting ect.

- The equipment lighting power can be selected from 140Watts to be 2000Watts. When a 35Watt, 70Watt or a 150Watt lamp is fitted, the lamp power can be supplied from the vehicle battery. Moreover, the end sides of metal halide lamp 70Watts and 150watts has the hot start function, which can solve a technical limitation that the metal halide lamp could not be lighted up immediately when power off suddenly.
- A camera and antenna equipment could be assembled according to customers requirement to increase the safety and improve the performance.
