Gripper bars with high intensity are applicable to all kinds of cardboard, paperboard and corrugated paper. Frontal ,back and side registration mechanism ensures great precision of die-cutting. Other parts are adopted such as intermittent mechanism with high precision, air clutch, pneumatic locking mechanism, programmable controller and human-machine interface. The interface can display various digital information of machine such as working speed ,amount of paper processed, total running time etc. It is easy to eliminate troubles according to the display of trouble shooting. Transducer is

adopted to control the main motor in achieving stepless speed variation. The machine has a lot of sensors and safe-ensuring devices to guarantee the safety to operator and of environment. Frontal and back pressure can be adjusted separately. It is convenient to stop the machine by hand. It can also realize die-cutting without clipper margin.
