

AgiBot X2

Fully Intelligent, Agile, and Robotic

The **AgiBotX2** is a fully intelligent and agile robot that combines sports intelligence, interactive intelligence, and task intelligence. It is as lively as a living being and as friendly as a fully intelligent companion.

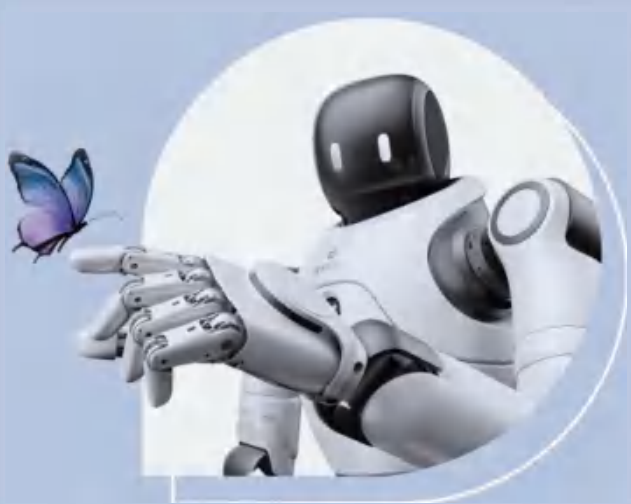

The dynamic and engaging design, combined with multimodal interaction and end-to-end models, delivers an intuitive and intelligent experience. Its modular architecture and advanced joint hardware enable the expansion of various human-like motion capabilities, achieving powerful motion intelligence.

product features

Lingdong | Vital Signs

- The body has 25-31 degrees of freedom, including 2 head degrees of freedom
- It can perform anthropomorphic gait, complex dance, nodding and shaking head, and head following sound. The movements are flexible and varied, vivid and interesting.

Affinity|Personification Interaction

- Visual interaction, voice interaction, tactile interaction, and facial expression interaction
- It can actively initiate natural, efficient, and warm emotional interactions by combining user gestures, scene information, and contextual context

Return to Smart|Autonomous Tasks

- Autonomous navigation, obstacle avoidance, and automatic recharging. Based on algorithmic decision-making, it operates without remote control for smarter performance.

Product Parameter

stature	Weight	cell
130cm	35kg	500wh
maximum terminal load	Continuation of the journey	total freedom of motion
3kg	≥2h(replaceable, self-charging)	31 (Excluding Dexterity)

application scenarios

Guided tours of cultural, entertainment, and scientific research education exhibition halls; health and wellness companionship services
