INTRODUCTION:

This DisplayPort 1.4 to HDMI2.0 MST Adapter allows Divide the computer's Displayport signal into two HDMI signals and transmit them to the monitor, which can output audio and video signals at the same time. Supports Displayport 1.4 input and two HDMI 2.0 outputs, can output two 4K*2K@60Hz resolutions at the same time, and is backward compatible with 1080P/720P/480P。The hub is perfect for graphic design, spreadsheet analysis, digital signage applications, and gaming. Improve multitasking and increase productivity by configuring the hub to work as a splitter with the same video image on each display, extending a video image to multiple displays, or expanding a video image by joining multiple monitors together as one display.

FEATURES:
