MODEL:EL-A125

ITEM: Mini HDMI to HDMI audio Converter

Introduction:

HDMI to HDMI+Audio3.5 audio converter, which converts HDMI input into an HDMI output and a 3.5 analog audio output, is a high-performance and multifunctional high-definition audio extractor that can extract audio signals from HDMI high-definition signals into audio or amplifier systems, thereby achieving audio effects that are difficult to achieve by video speakers. And it can also unlock HDCP (unlock KEY) and crack HDCP encryption. Most HDMI output devices support the HDCP protocol. Such as computers, Blu ray players, etc. But not all display devices support the HDCP protocol, so this converter is needed to crack HDCP so that devices that do not support HDCP can receive HDMI signals normally.

Features:

1. Input signal: Supports HDMI1080P/60HZ.
2. Output signal: HDMI loop out, 3.5 analog audio output.
3. Shell: ABS plastic shell in small white box style.
4. Power supply: USB power supply (5V) or power adapter power supply.
