

High Performance Synchronous Rectifier IC

Product Description

DK5V120RXXM is a simple but high efficiency synchronous rectifier IC with only two function pins A-K, corresponding A-K pins of Schottky diode. With 120V power NMOS integrated, it can significantly reduce the conduction loss of traditional Schottky diode and improve the overall efficiency. It can replace the same specifications of Schottky rectifier diodes currently on the market.

Typical Applications

- USB Charger
- Adapter
- LED Driver, etc.

Main Features

- Suitable for fly-back PSR/SSR applications
- Ultra low VF
- Ultra low temperature rise
- 120V XXmΩ NMOS integrated
- Support CCM&DCM&QR fly-back mode
- Patented self-power supply, no need of external power supply component
- With intelligent detection system, no need of front-end synchronization signal
- Improve EMC/EMI effect
- Replace Schottky Diode directly
- No need of external components

Package/Order Information

SM-10

Product Model	Package Type	Typical Power
DK5V120R15M	SM-10	20V, 3.3A

Remark: Test typical power in closed environment @45°C ambient temperature.
