Register

Users outside China must register the mobile number in the device first. For register, you can use any mobile number to send "**RG+ device mobile number**" to the device mobile

register fails, the device number is empty, e.g:RG13866668888”. This means the message sent doesn’t have a mobile number, you need to add a mobile number.

Please do not add any country code before the mobile number. For example, the country for UAS is “1”; you don’t need to write “RG16200000000”or “RG001620000000”.

URL/Listening: After the product is open with a SIM card inside, call its mobile number and after it’s through, keep the call for 10 seconds, you can hear things within 10 meters around the product. If you hanging off before connecting successfully or less than 10s after connecting you can also receive a URL telling the device’s current location. It’s highly suggested to wait longer after opening the device for the first time and then make the call.

Location Inquiry: Edit capital letters “**DW**” and send to the device’s mobile number, you will receive a reply with address or URL. You can log in either by your mobile phone or PC to check detailed location.

Platform Inquiry: (Optional, only authorized users can obtain passwords to login the platform.)

Can query machine position, electric quantity inquiry, panic query, missing message, electronic fence, adding equipment etc. Also, users can go to <http://gps958.com> to download an android version to android phones.

When no one is authorized, any mobile phone can send "DW" to check the device's location but once any authorization is done, only the authorized users are able to obtain the location info by sending "DW".

1. Authorization

Edit message "**SQ+ mobile number**" to the device's mobile number, you can authorize this mobile number.

For example, edit "SQ79609500000" can authorize the number 79609500000. If you need to authorize several mobile numbers at the same time (should be less than four), you can use a star key to separate them. For example:"

SQ79609500000*SQ79608800001". Once the authorization is successful, the authorized mobile number will receive

"**Authorization success, Device XXX, password XXX,**
<http://gps958.com> **XXX**"

OTHER MOBILE NUMBERS.

2. Cancel Authorization

Use any authorized mobile number to send "SQ" to the device, you can cancel authorization of all mobile numbers. Once the authorized mobile numbers receive accord confirmation SMS, the cancellation is done and, again, you can use any mobile to send "DW" to get its location info.

3, path query (GPRS monthly flow, not more than 30M)
default is closed.

Open monitoring: **DKJK** Close monitoring: **GBJK**

Voice Callback

Here is how to set the voice callback:

Call the SIM card number in the device (either by mobile or fix phone), get through, and hear the sounds around for 3s, hang off, and this mobile /fix number is set successfully.

Send "1111" to the device to activate this function, and can also send "0000" to deactivate.

successfully, when the user press SOS key for more than 3 seconds, the device will call the set number directly.

Vibration / mobile alarm:

alarm if there is a mobile / vibration, the alarm will automatically send text messages to the set number.

Vibration / movement; ZDKQ vibration / mobile; ZDGB

The sensitivity of the shock is set to; DB50 number as the sensitivity (1-100).

APN set; Edit SMS APN, cmnet, , # sent to the alarm, the alarm automatically reply set successfully
