

3.7 **Wooden Diffuser**

Acoustic diffuser is a simple audio modulation, to improve the sound quality. Size, shape, also can be meet your various design need. It has excellent diffusion effect, rich and mellow reflection without distortion. To achieve a reasonable sound from different angles to reach the audience, can significantly improve the sound quality.

Features & Benefits

1.Sound Diffuser

Reflecting faults If a person in a flat side wall of the rectangular hall, he heard music heard the voice will be ringing, hard or harsh, this phenomenon is called frequency dyeing effect.

2.Theory

Colorbo Sound Diffuser is a kind of irregular plane design, the purpose is reflected in the produce, it spread produces is very rich and round in early sound mixing sound, from--from the lateral seems to reach the audience, roof and can significantly improve the sound quality hall effect .

3.Spread principle

Colorbo spread principle is a change of the depth of the parallel "algae into" composition, when sound waves from 135 degrees to the level of the incident Colorbo position, it can in 30 degrees to 150 degrees in equal between the intensity of sound will reflect out .

Type: 6T

Specification: 600*600*112mm

 **COLORBO DECOR**
Shanghai ColorBo Industrial Co.,Ltd.

Type: 2W-1

Specification: 600*600*70mm

Type: 2W-2

Specification: 900*900*70mm

Type: J10

Specification: 600*600*100mm

Type: J12

Specification: 600*600*120mm

Type: J16

Specification: 600*600*100mm

Type: J36

Specification: 600*600*100mm

Type: DF30

Specification: 600*600*100mm
