

## Technical Advantages:

| No. | Maximum Width (mm) | Traditional Extrusion   |                         | EverSkill Plat Extrusion |                         |
|-----|--------------------|-------------------------|-------------------------|--------------------------|-------------------------|
|     |                    | Extrusion Machine (Ton) | Min Wall Thickness (mm) | Extrusion Machin (Ton)   | Min Wall Thickness (mm) |
| 1   | 220                | 1800                    | 1.5                     | 1000                     | 0.4                     |
| 2   | 580                | 6000                    | 3                       | 3000                     | 1.0                     |
| 3   | 350                | 3600                    | 2                       | 2000                     | 0.8                     |
| 3   | 650                | 10000                   | 4                       | 3600                     | 1.0                     |
| 4   | 1200               | 15000                   | 5                       | 6000                     | 1.5                     |

- Small machine can squeeze big size products, cost greatly reduced.
- High component alloy, difficult to extrude material, becomes possible to be extruded.
- It provides greater imaginative space for structural design.
- Extrude wide thin - wall profile becomes a reality.
