## Bamboo Disposable Knife

### 1. Product Description

|DISPOSABLE|NATURAL|COMPOSATABLE|

Many people around the world are looking for more natural options for the things that they use every day. Cutlery and packaging materials are used so frequently that changing to a more natural alternative will have a big impact on the environment. Bamboo is one of the first alternatives that most people try since we have been working with bamboo for hundreds of years.

Bamboo is a great alternative for single use pleasing cutlery because it is biodegradable. When disposed of, it will break down rather than sitting in a landfill. Wood cutlery are also temperature resistant so that you can use them with hot and cold foods. Many healthy eating restaurants add them to their takeout orders to help customers and the environment. The high-quality set of bamboo cutlery can be a welcome change to people's daily lives. Fortunately, you can take advantage of the push to get back to more natural options by switching to EVERYDAY's eco-friendly bamboo and wooden cutlery.
