

1340-PQ2620(6+6) High-Frequency Transformers

Technical Specification

PQ Series High-Frequency Transformer

Features: Low loss, low temperature rise, anti-interference;

reasonable shape, power 40W-600W (able to reduce installation size); multiple pins for easy winding/wiring.

Applications: Suitable for main power transformers, drive transformers, smoothing chokes, auxiliary power transformers; widely used in networking, communications, power, electrical equipment, medical and other fields.

Peculiarity: Bobbin types adopt traditional styles , transformer design parameters are subject to customer requirements or injection specifications, supporting global ODM/OEM cooperation.

Certification

ISO Approval	GB/T 19001-2016/ISO 9001:2015
CQC Approval	GB/T 19212.1-2016;GB/T 19212.17-2019
UL Approval	11454637

This electronic component has been designed and developed for usage in general electronic equipment only. This product is not authorized for use in equipment where a higher safety standard and reliability standard is especially required or where a failure of the product is reasonably expected to cause severe personal injury or death, unless the parties have executed an agreement specifically governing such use. Moreover, Infinity Technology Co.,Ltd. products are neither designed nor intended for use in areas such as military, aerospace, aviation, nuclear control, submarine, transportation, transportation signal, disaster prevention, medical, public information network, etc.. Infinity Technology Co.,Ltd must be informed about the intent of such usage before the design-in stage. In addition, sufficient reliability evaluation checks for safety must be performed on every electronic component which is used in electrical circuits that require high safety and reliability functions or performance.
