Related Products

- **Aluminum insect screen** : Made of aluminum wire, it is one of the most common used types, which can resist the corrosion and rust. The charcoal and black color can reduce the glare. The silver color is the traditional, economical color and it can improve the visibility.
- **Fiberglass insect screen** : Made of fiberglass wire, it is another common used type, which can anti-burning, corrosive and static. Fiberglass is less expensive, and has the advantage of no denting when it is hit or pushed.
- **Galvanized insect screen** : Made of low carbon steel wire and then galvanized, the color maybe white or bluish white, which has excellent light transmission. It can resist the corrosion and rust.
- **Stainless steel insect screen** : Made of stainless steel wire, the price may be higher than other material. But the special feature making it is worth for their price. It is the most durable material with anti-rust, heat, acid, alkaline and corrosion.
- **Epoxy coated insect screen** : Made of epoxy coated low carbon steel wire, aluminum wire and stainless steel wire, the epoxy coated insect screen has high tensile, high elongation and strong toughness. It also can resist corrosion and rust.
