

Company Profile :

Our company has deep expertise in the building decoration chemical industry, possessing a full range of high-quality building decoration chemical materials. We consistently prioritize stringent product quality as our core business objective. Adhering to the core principles of "integrity, quality first, continuous improvement, and excellent service," we uphold a professional and responsible service philosophy, deeply understanding customer needs, continuously promoting technological innovation and product iteration, and accurately matching the diverse and personalized demands of the market and our customers.

With "zero defects and zero complaints" as our ultimate quality goal, we implement rigorous control throughout the entire process of production, R&D, and sales. We build a solid foundation for quality with professional capabilities and empower customer value with a sense of responsibility, striving to provide our customers with reliable products and efficient service support.

Product Details :

Our peptide products are made from carefully selected high-quality raw materials from around the world, utilizing a patented targeted enzymatic hydrolysis technology to precisely target active peptides with a molecular weight <1000Da. These peptides can be directly absorbed into the bloodstream without complex digestion, achieving an absorption rate exceeding 95%, far superior to ordinary proteins. Our products encompass a wide range of peptides from animal and plant sources, marine organisms, and other sources, combined with synergistic ingredients such as PQQ and elastin peptides to achieve multi-dimensional effects including immune regulation, tissue repair, anti-aging skincare, and metabolic regulation. Production adheres to GMP standards, with stringent quality control throughout the entire process. Our products have passed multiple international certifications, ensuring zero additives and low allergenicity, making them suitable for diverse scenarios such as post-operative recovery, daily health maintenance, and beauty skincare. We also offer customized development, OEM/ODM services, and stable cross-border logistics to comprehensively meet the needs of our global clients.

Based in the domestic market, we continue to increase our R&D investment, meticulously crafting high-quality peptide products, and steadfastly pursuing a scientific, environmentally friendly, and sustainable development path. Expanding into the international market, we uphold our commitment to sincerely serving society and strive to become a world-class benchmark enterprise in the peptide industry, integrating modernization, ecology, and technology. We eagerly anticipate joining hands with global suppliers and customers to forge stable and profound strategic partnerships, working together to create a bright future for the industry.

Product Advantages

1. High purity ensures solid quality: Refined using cutting-edge purification technology, the peptide purity reaches the industry's high level, and the impurity content is controlled within an extremely low range.
2. Highly efficient retention of active ingredients, delivering efficacy directly to the core: Relying on a customized production process, the original biological activity of peptides is locked in to the maximum extent, accelerating the absorption and utilization rate by the human body, and achieving precise efficacy delivery.
3. Customized services to meet diverse needs: We have assembled a professional R&D team with precise customization and synthesis capabilities, and can create peptide products with specific amino acid sequences and exclusive functions according to customer requirements.

Delivery time: 3-15 days

FOB Ports Mainland China

Payment methods: Ali, PayPal, Bitcoin, USDT
