Faster performance key in cables, adapters

Many models power up gadgets at a faster rate using Qualcomm's Quick Charge technology.

The latest cables and adapters from suppliers in the Greater China region facilitate faster charging and transfer speeds between devices. Many models employ Qualcomm's Quick Charge technology to support speedier charging rates.

One unique adapter can refill 20 percent of a device's battery capacity under 10 minutes. Auto detection is also a popular feature, enabling the chargers to choose the right USB load current limit for each gadget.

Products can likewise copy files from one device to another at a faster rate, with one standout unit transmitting data at 3Gbps. USB Type C dominates the plugs selection, thanks to its flexibility to connect to old ports and its reversible feature.

Many data cables also come with flat or braided cords to prevent tangling.

The gallery below features the latest cables and adapters from Greater China.

Quick Charge 3.0, auto detection

2001 Technology Inc. (Taiwan)

Model T97UQ3

[CONTACT SUPPLIER](#)

The model T97UQ3 travel charger offered by 2001 Technology Inc. has two USB ports, one of which supports Quick Charge 3.0 and auto detection. The model operates on 100 to 240VAC and consumes 20W. It is housed in PC, and has glossy and matte finish. Product dimensions are 52x52x34mm.

USB drive tests blood for HIV

Researchers at the [Imperial College London](#) have developed a USB drive that can test blood for HIV. The device could be a big breakthrough in bringing inexpensive and accessible blood testing to parts of the world where it is not commonly available. It only needs a drop of blood to analyze, with results given through an electrical signal that can be read via a laptop or a mobile device.

The test is said to be disposable, although the university website does not say if this means that the whole device must be discarded after use. Regardless, it should result in a much more affordable way to monitor HIV levels in blood.

The development is critical to HIV treatment, which works by reducing virus levels to near zero. There is currently no cure for HIV, but treatments can result in a normal life expectancy with proper monitoring. It is particularly targeted at remote regions in sub-Saharan

Africa where HIV is prevalent. The device is said to deliver faster results, which is crucial in dealing with the disease.

Current HIV blood tests take at least three days for results to get back from a laboratory, according to the university. This USB test can produce results within 30 minutes and is highly accurate. A test of 991 blood samples showed 95 percent accuracy with results returned in an average of 20.8 minutes.

[USB drives](#) have become ubiquitous, so this kind of technology is promising for those looking to find ways to propagate good health care practices. Other kinds of mobile blood tests have been around for many years.

Other companies already offer USB devices that can read back glucose levels, for example. Glucose-monitoring wearables are also slowly becoming more common.

Portable laptop chargers now charge everything

One of the biggest advantages of USB-C is the fact that it can replace separate chargers for several different devices. Theoretically, users could have one small charger for their laptop, smartphone, tablet and potentially many other devices. The reality so far has been a bit underwhelming. Laptops still ship with needlessly large power bricks, for example. One company aims to fix that with what it's calling the world's smallest [laptop charger](#).

The idea behind [Finsix's Dart charger](#) is that it's a 65W laptop charger that's the size of a smartphone charger. Since it uses USB-C, the product can charge many modern smartphones as well. The included cable also has a USB-A port for people who want to charge a handset and a laptop at the same time.

A writer for the Verge [sang the praises](#) of the Dart charger, but noted it's not ideal for all laptops. The latest 15in MacBook Pro, for example, ships with an 87W charger.

The 13in model, on the other hand, includes a 61W

charger. That would make the Dart charger ideal for some of the of the smaller USB-C-powered laptops on the market that don't require quite as much juice. Otherwise, the laptop might not charge while it's being used, a problem some Micro-USB devices had.

There are a couple drawbacks to this svelte laptop charger, however. Most notably is the fact that it costs \$99, a steep price for any charger. The other downside is that one part of the included cable is a proprietary connector for the Dart. When most USB-C chargers on the market include cables with dual USB-C connectors, this move by Finsix seems like a very cheap ploy to boost profits.

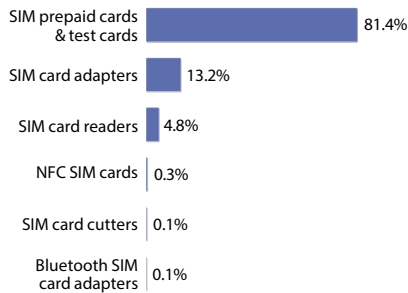

There's plenty of opportunity for competitors, though. The Dart actually looks like some of the smaller laptop chargers already offered by China suppliers such as those from [Shenzhen Soy Technology](#). The main difference is that many of those suppliers haven't yet adopted USB-C. For product designers sourcing from China, though, that means the market is wide open.

Source smarter with Global Sources

At Global Sources, our No. 1 priority is the protection of our buyers' interests and businesses. The following describes our supplier verification related systems, processes and icons.

Verified Suppliers are suppliers and exhibitors whose business registration details have been verified by independent third parties such as [D&B \(Dun & Bradstreet\)](#), [Ease Credit](#) or [Experian](#). *(For buyers' convenience, GlobalSources.com also includes some suppliers who have not been verified.)*

Verified Manufacturers are Verified Suppliers whose business scope, as licensed by relevant government departments, allows them to manufacture goods.

Exhibitors have been verified face-to-face by Global Sources staff and have had a physical booth presence at one or more Global Sources trade shows.

Supplier Capability Assessment is an independent, third-party report based on an onsite visit, and includes in-depth information about suppliers' operations, production capabilities, QC processes, management and more. It is an optional paid service for all Verified Suppliers.
