Outdoor electronics stress speed, portability

Models adopt high-power motors and flexible storage and transport options.

China suppliers of outdoor electronics stress speed and portability in their releases by using high-power motors, tri-proof materials, and flexible storage and transport options.

The selection in this Buyer's Guide is dominated by electric personal transporters, action cameras, tripods, outdoor speakers, drones and LED lamps.

For EPTs, units typically cover 15 to 45km on one full charge. Most of them are foldable, allowing

users to carry and store them easily after each use. They also run on top-brand batteries and high-power motors. LED lights are sometimes employed for night riding.

Display quality is stressed in HD-capable action cameras while weather resistance is highlighted in speakers to suit different outdoor settings.

The gallery below highlights the latest outdoor electronics from China.

Works as FM radio, alarm clock, charger

All Best Technology Ltd
(mainland China)

Nikon gets 'serious' with mirrorless cameras

Mirrorless cameras have recently gone from unique, niche products to serious professional tools. Not all photographers are won over by mirrorless systems, still preferring [DSLR cameras](#), but the switch may be as inevitable as the one from film to [digital cameras](#). Now, [Nikon is reportedly working](#) on "serious" mirrorless cameras. The company already has some on the market, but they have small sensors that made them inferior to products from competitors.

This move had to come eventually. Mirrorless cameras are getting more popular. Sony is a dominant brand in the market. Canon just launched its EOS M5, a serious DSLR alternative. Last year, [Hasselblad](#) announced a 50MP mirrorless camera, the first medium-format DSLM camera on the market.

The rise of DSLMs comes as more affordable point-and-shoot cameras are struggling. The value of the compact point-and-shoot camera market declined 28

percent in 2016, according to market research group GfK. Volume crashed 38 percent.

In some areas, mirrorless cameras are already flourishing. In Southeast Asia, sales volume rose 45 percent to 421,000 units and the value of the market increased 51 percent to \$287 million. GfK defined Southeast Asia as Singapore, Malaysia, Indonesia, Thailand and the Philippines.

The biggest impact on the compact point-and-shoot camera market is smartphones. Many mobile phone cameras are good enough for consumers. Younger buyers looking for better pictures than what a smartphone can offer are typically going to the upmarket. They are willing to spend a little more on a good DSLM, which have the option to change lenses while still being smaller than DSLRs. It is a good thing Nikon is getting into the market now before it faces a fate similar to Kodak.

Drone sales to reach 3 million units in 2017

Thanks to automated delivery and loosening regulations, [drones](#) were more visible than ever in 2016. Things are only getting better for the drone market, according to the [latest figures from Gartner](#). The number of drones produced is expected to reach nearly 3 million in 2017, up 39 percent from last year. Global revenue from drones is expected to jump 34 percent to more than \$6 billion.

On a per-unit basis, commercial drones make up a much smaller portion of the market than consumer drones. Gartner projects 2.8 million drones in 2017 will be consumer drones, with another 174,000 belonging to the commercial market. Commercial drones pull in a lot more money, though. They are expected to account for 61 percent of the market's revenue at \$3.7 billion.

Commercial drones need to be more durable and capable than the average consumer drone, so they are much more costly. Industries are happy to pay the

price when they cut costs in other areas. Surprisingly, commercial drones are not growing as quickly in the agriculture industry, in which drones took off early.

Given the economics of the industry, the costs of drones were not as easily justified as in some other industries such as oil and gas, energy, infrastructure, and transportation. The inspection market segment alone is expected to account for 30 percent of the commercial drone market through 2020, according to Gartner.

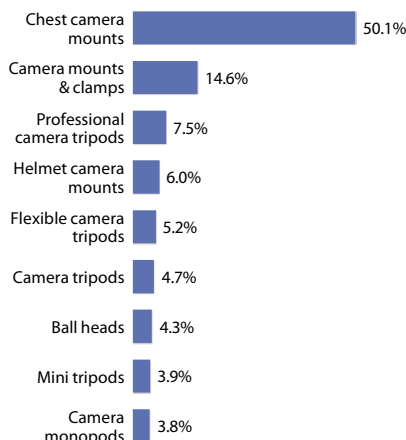

On the other end, delivery drones are seen to be less than 1 percent of the commercial drone market. While these drones have captured the public imagination, especially given Amazon's PR blitz and fanfare around the technology, there are still many regulatory hurdles. This means that the technology is not about to go mainstream anytime soon. Early on, their uses will be limited to niche business-to-business applications.

Camera tripods & adapters

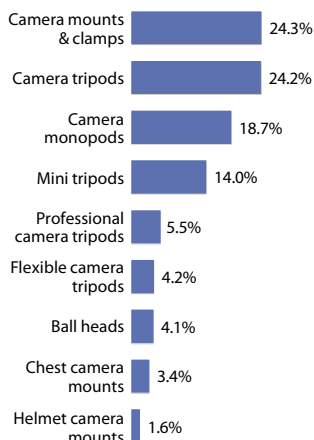

Buyer demand trends are taken from buyer and supplier activity in the featured product group on GlobalSources.com in the month preceding publication of this magazine.

- **Buyer requests** track total inquiries from our independently verified worldwide community of more than 1 million buyers.
 - **Product profiles** represent the total number of unique products available from export-ready suppliers in our easily searchable catalogs.
 - **New product postings** indicate the number of new product profiles added to our website by suppliers during the period.
- For these and thousands of other categories, visit Global Sources online and sign up for Product Alerts to receive the latest supplier postings. Use the website's Product Search function to find hundreds of products and send inquiries directly to verified exporters.

Source smarter with Global Sources

At Global Sources, our No. 1 priority is the protection of our buyers' interests and businesses. The following describes our supplier verification related systems, processes and icons.

Verified Suppliers are suppliers and exhibitors whose business registration details have been verified by independent third parties such as [D&B \(Dun & Bradstreet\)](#), [Ease Credit](#) or [Experian](#). *(For buyers' convenience, GlobalSources.com also includes some suppliers who have not been verified.)*

Verified Manufacturers are Verified Suppliers whose business scope, as licensed by relevant government departments, allows them to manufacture goods.

Exhibitors have been verified face-to-face by Global Sources staff and have had a physical booth presence at one or more Global Sources trade shows.

Supplier Capability Assessment is an independent, third-party report based on an onsite visit, and includes in-depth information about suppliers' operations, production capabilities, QC processes, management and more. It is an optional paid service for all Verified Suppliers.
